(Formerly University of Pune)

## Four Year Degree Program B.Sc.(Computer Science)

With

**Major: Computer Science** 

(Faculty of Science and Technology)

## Syllabi for F.Y.B.Sc. (Computer Science)

(For Colleges Affiliated to Savitribai Phule Pune University)

Choice Based Credit System (CBCS) Syllabus Under National Education Policy (NEP) **To be implemented from Academic Year 2024-2025** 

#### Title of the Course: B.Sc.(Computer Science)

#### **Preamble:**

The B. Sc. (Computer Science) and B. Sc. (Computer Science) (Honors) and (Research) course is systematically designed program with Computer Science as a major subject under the faculty of Science and Technology. The objective of the course is to prepare studentsto undertake careers involving problem solving using computer science and technologies, or to pursue advanced studies and research in computer science. The syllabus which comprises of Computer Science (Major) subject along with that of the three allied subjects (Mathematics, Electronics and Statistics) (Minor) covers the foundational aspects of computing sciences and also develops the requisite professional skills and problem solving abilities using computing sciences.

#### Introduction:

At the first year of under-graduation, the basic foundations of two important skills required for software development are laid. A course in problem solving and programming along with a course in database fundamentals forms the preliminary skill set for solving computational problems. The practical courses are designed to supplement the theoretical training in the year. Along with Computer Science (Major), VSC and SEC courses help in building a strong technical foundation. Another aspect of this course is IKS which tells about the rich heritage and advancement of India in the field of computation.

At the second year of under-graduation, computational problem solving skills are further strengthened by a course in Data structures, C++ and python programming. Software engineering concepts that are required for project design are also introduced. Essential concepts of computer networking are also introduced in this year. The practical course included in both semesters complements the theory courses. Field projects/ OJT are introduced so that student can implement the concept they have learnt in first year.

At the third year of under-graduation, all the subjects are designed to fulfill core Computer Science requirements as well as meet the needs of the software industry. Theory courses are adequately supplemented by hands-on practical courses. Major elective courses are taking care of recent advancement in the field of computer science. Minor and Skill Enhancement courses enable the students to acquire additional skills.

At the fourth year (honors) and (research) of under-graduation, all the subjects are designed to fulfill core Computer Science requirements as well as meet the needs of the software industry. Practical courses and field projects enable students to get hands on training. Various learning tracks are open through Major elective courses. Research methodology course will create interest among the students to carry research in the field of computer science.

#### **Objectives:**

- To develop problem solving abilities using a computer.
- To build the necessary skill set and analytical abilities for developing computer based solutions for real life problems.
- To train students in professional skills related to Software Industry.
- To prepare necessary knowledge base for research and development in Computer Science.
- To help students build-up a successful career in Computer Science and to produce entrepreneurs who can innovate and develop software products.

#### Eligibility

- a) H.S.C.(10 + 2) Science stream with Mathematics.
- b) Three years diploma course after S.S.C.(10<sup>th</sup> std.) of Board of Technical Education conducted by Government of Maharashtra or its equivalent.

#### **Programme Out comes:**

PO No	Outcomes
PO1	Develop creative skills, critical thinking, analytical skills and research to address
	the real world problems using computational skills
PO2	Understand and apply mathematical foundation, computing and domain
	knowledge and develop computing models for defined problems
PO3	Understand software project management and computing principles with
	computing knowledge to manage projects in multidisciplinary environments
PO4	Illustrate the concepts of systems fundamentals, including architectures and
	organization, operating systems, networking and communication
PO5	Understand and apply the concepts of Digital Electronics, Computer
	Architecture, IoT etc.
PO6	Recognize the need for and develop the ability to engage in continuous learning
	as a Computing professional
PO7	Apply modern computing tools, skills and techniques necessary for innovative
	software solutions
PO8	Communicate effectively with the computing community as well as society by
	being able to comprehend effective documentations and presentations
PO9	Gain Self Discipline and commit Professional Ethics in global economic
	environment
PO10	Individual & Team Work: Ability to work as a member or leader in diverse
	team's in multidisciplinary environment
PO11	Identify opportunities, entrepreneurship vision and use innovative ideas to create
	value and wealth for the betterment of the individual and society

### Savitribai Phule Pune University

2.11 Character input and output.         2.12 String input and output.         2.13 Formatted input and output.         Chapter 3       Control Structures         6 Hrs         3.1 Decision making structures:- if ,if-else, switch and conditional operator.         3.2 Loop control structures:- while ,do while, for.         3.3 Use of break and continue.         3.4 Nested structures.         3.5 Unconditional branching (goto statement).         Chapter 4       Functions         4.1 Concept of function, Advantages of Modular design.         4.2 Standard library functions.         4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.         4.4 Recursive functions.         4.5 Scope of variables and Storage classes.
2.12 String input and output.         2.13 Formatted input and output.         Chapter 3       Control Structures         3.1 Decision making structures:- if ,if-else, switch and conditional operator.         3.2 Loop control structures:- while ,do while, for.         3.3 Use of break and continue.         3.4 Nested structures.         3.5 Unconditional branching (goto statement).         Chapter 4       Functions         4.1 Concept of function, Advantages of Modular design.         4.2 Standard library functions.         4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.         4.4 Recursive functions.         4.5 Scope of variables and Storage classes.
Chapter 3       Control Structures       6 Hrs         3.1 Decision making structures:- if ,if-else, switch and conditional operator.       3.2 Loop control structures:- while ,do while, for.         3.3 Use of break and continue.       3.4 Nested structures.         3.5 Unconditional branching (goto statement).       6 Hrs         Chapter 4         Functions       6 Hrs         4.1 Concept of function, Advantages of Modular design.       6 Hrs         4.2 Standard library functions.       4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.         4.4 Recursive functions.       4.5 Scope of variables and Storage classes.
Chapter 3       Control Structures       6 Hrs         3.1 Decision making structures:- if ,if-else, switch and conditional operator.       3.2 Loop control structures:- while ,do while, for.         3.3 Use of break and continue.       3.4 Nested structures.         3.4 Nested structures.       3.5 Unconditional branching (goto statement).         Chapter 4       Functions       6Hrs         4.1 Concept of function, Advantages of Modular design.       4.2 Standard library functions.         4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.         4.4 Recursive functions.         4.5 Scope of variables and Storage classes.
3.1 Decision making structures:- if ,if-else, switch and conditional operator.         3.2 Loop control structures:- while ,do while, for.         3.3 Use of break and continue.         3.4 Nested structures.         3.5 Unconditional branching (goto statement). <b>Chapter 4</b> Functions         4.1 Concept of function, Advantages of Modular design.         4.2 Standard library functions.         4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.         4.4 Recursive functions.         4.5 Scope of variables and Storage classes.
<ul> <li>3.2 Loop control structures:- while ,do while, for.</li> <li>3.3 Use of break and continue.</li> <li>3.4 Nested structures.</li> <li>3.5 Unconditional branching (goto statement).</li> </ul> Chapter 4 Functions 6Hrs 4.1 Concept of function, Advantages of Modular design. <ul> <li>4.2 Standard library functions.</li> <li>4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement. <ul> <li>4.4 Recursive functions.</li> <li>4.5 Scope of variables and Storage classes.</li> </ul></li></ul>
3.3 Use of break and continue.         3.4 Nested structures.         3.5 Unconditional branching (goto statement). <b>Chapter 4</b> Functions         4.1 Concept of function, Advantages of Modular design.         4.2 Standard library functions.         4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.         4.4 Recursive functions.         4.5 Scope of variables and Storage classes.
3.4 Nested structures.         3.5 Unconditional branching (goto statement).         Chapter 4       Functions       6Hrs         4.1 Concept of function, Advantages of Modular design.       4.2 Standard library functions.       4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.         4.4 Recursive functions.       4.5 Scope of variables and Storage classes.
3.5 Unconditional branching (goto statement).         Chapter 4       Functions       6Hrs         4.1 Concept of function, Advantages of Modular design.       4.2 Standard library functions.       4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.         4.4 Recursive functions.       4.5 Scope of variables and Storage classes.
Chapter 4       Functions       6Hrs         4.1 Concept of function, Advantages of Modular design.       4.2 Standard library functions.         4.2 Standard library functions.       4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.         4.4 Recursive functions.       4.5 Scope of variables and Storage classes.
<ul> <li>4.1 Concept of function, Advantages of Modular design.</li> <li>4.2 Standard library functions.</li> <li>4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.</li> <li>4.4 Recursive functions.</li> <li>4.5 Scope of variables and Storage classes.</li> </ul>
<ul> <li>4.2 Standard library functions.</li> <li>4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.</li> <li>4.4 Recursive functions.</li> <li>4.5 Scope of variables and Storage classes.</li> </ul>
<ul> <li>4.3 User defined functions:- declaration , definition, function call, parameter passing (by value , by reference ), return statement.</li> <li>4.4 Recursive functions.</li> <li>4.5 Scope of variables and Storage classes.</li> </ul>
by reference ), return statement. 4.4 Recursive functions. 4.5 Scope of variables and Storage classes.
<ul><li>4.4 Recursive functions.</li><li>4.5 Scope of variables and Storage classes.</li></ul>
4.5 Scope of variables and Storage classes.
Chapter 5 Arrays 7Hrs
5.1 Concept of array.
5.2 Types of Arrays – One, Two and Multidimensional array.
5.3 Array Operations - declaration, initialization, accessing array elements.
5.5 Thirdy operations declaration, initialization, decessing analy elements.
5.4 Memory representation of two-dimensional array (row major and column major)
Chapter 5 Arrays 71115

Sorting an array (Simple exchange sort, bubble sort), Merging two sorted arrays, Matrix operations (trace of matrix, addition, transpose, multiplication, symmetric, upper/ lower triangular matrix )

- R7. Programming with C, B. Gottfried, 3rd edition, Schaum's outline Series, Tata McGraw Hill.
- R8. Programming in ANSIC, E. Balagurusamy, 7th Edition, McGraw Hill.

Sa	vitribai Phule Pune Universi	ity					
F.Y.B.Sc. (Computer Science) - Sem – I							
	Course Type: Subject 1 Code : CS-102-P						
Course	Fitle :Lab Course based on C	S-101-T					
Teaching Scheme 3	No. of Credits	Examination Scheme					
4 Hrs /Week	2	IE:15Marks					
		UE: 35Marks					
Prerequisites							
Previous knowledge of any	programming concepts is assu	med.					
Knowledge of mathematica	l operator.						
• Student think the out of box	ie imagination power.						
Course Objectives.							
• Explore and develop the alg	orithmic approaches to proble	m solving.					
• Understand and implement	modular programs using contro	ol structures and arrays in 'C'.					
• Implement programming lo	gic and also test, debug and ex	ecute programs.					
• Implement Control the sequ	ence of the program and give	logical outputs.					
Course Outcomes:-							
On completion of this course, students will be able to:							
• Explore and develop the algorithmic approaches to problem solving.							
• Understand and implement	• Understand and implement modular programs using control structures and arrays in 'C'.						
• Implement programming lo	gic and also test, debug and ex	ecute programs.					
Implement Control the sequ	ence of the program and give	logical outputs.					

#### Guidelines:

**LabBook:** The lab book is to be used as a hands-on resource, reference and record of assignment submission and completion by the student. The lab book contains the set of assignments which the student must complete as a part of this course.

#### Submission:

Problem Solving Assignments:

The problem solving assignments are to be submitted by the student in the form of a journalcontaining individual assignments heets. Each assignment includes the Assignment Title, Problem statement, Date of submission, Assessment date, Assessment grade and instructors sign.

Programming Assignments:

Programs should be done individually by the student in the respective login. The codes should be uploaded on either the local server, Moodle, Github or any open source LMS. Print-outs of the programs and output may be taken but not mandatory for assessment.

#### Assessment:

Continuous assessment of laboratory work is to be done based on overall performance and lab assignments performance of student. Each lab assignment assessment will be assigned grade/marks based on parameters with appropriate weightage. Suggested parameters for overall assessment as well as each lab assignment assessment include- timely completion, performance, innovation, efficient codes and good programming practices.

#### **Operating Environment:**

For 'C' Programming: Operating system: Linux Editor: Any linux based editor like vi, edit etc. Compiler: cc or gcc

	LAB Course Contents						
A) C Programmin	A) C Programming						
Assignment 1	Problem Solving Aspects						
1. Pseudo-code to	programs.						
2. Compilation pro	ocess (compilers, interpreters), linking and loading, syntax and semantic						
errors, testing a	program						
<b>3.</b> Practices (namin	ng conventions, documentation, indentation).						
Assignment 2 'C' Fundamentals							
• 'C' tokens and (	Character set, Keywords , Identifiers						
• character, integer, float, string, escape sequences, enumeration constant.							
• Built-in and use	r defined data types and Operators, Expressions, types of operators,						

Operator preced	lence and Order of evaluation.
Assignment 3	Control Structures : Conditional Structures
• Use of if, if-else	e, and.
• Use of Switch c	ase
• Use of conditio	nal operator
Assignment 4	Control Structures : Loop Control Structures
• Use of While lo	op
• Use of Do While	e loop
• Use of for lo	
• Use of break an	d continue.
Nested structure	es and goto statement.
Assignment 5	Control Structures : Break continue and Nested Loop
• Use of break an	d continue.
Nested structure	es and goto statement.
Assignment 6	Functions
• User defined fu return statemen	nctions:- declaration, definition, function call, parameter passing (by value), t.
Assignment 7	Recursive Functions
• Use of Recursiv	re functions.
	Seens of wowinklog
Assignment 8	Scope of variables
Assignment 8 • Use of Scope of	
	fvariables
• Use of Scope of	fvariables
<ul> <li>Use of Scope of</li> <li>Use of Storage</li> <li>Assignment 9</li> </ul>	f variables classes.
<ul> <li>Use of Scope of Use of Storage</li> <li>Assignment 9</li> <li>One Dimension elements.</li> <li>Assignment 10</li> </ul>	f variables         classes.         One Dimensional Arrays         al Arrays (1D) Operations - declaration, initialization, accessing array         One Dimensional Arrays : passing array to function
<ul> <li>Use of Scope of Use of Storage</li> <li>Assignment 9</li> <li>One Dimension elements.</li> <li>Assignment 10</li> </ul>	f variables classes. One Dimensional Arrays al Arrays (1D) Operations - declaration, initialization, accessing array
<ul> <li>Use of Scope of Use of Storage</li> <li>Assignment 9</li> <li>One Dimension elements.</li> <li>Assignment 10</li> </ul>	f variables         classes.         One Dimensional Arrays         al Arrays (1D) Operations - declaration, initialization, accessing array         One Dimensional Arrays : passing array to function
<ul> <li>Use of Scope of Use of Storage</li> <li>Assignment 9</li> <li>One Dimension elements.</li> <li>Assignment 10         <ul> <li>Assignment 11</li> </ul> </li> </ul>	f variables classes. One Dimensional Arrays al Arrays (1D) Operations - declaration, initialization, accessing array One Dimensional Arrays : passing array to function on Passing 1D arrays to function

#### Note: Lab Book be prepared for this course by BOS.

	Savitribai Phule Pune Univer	rsity
F.	Y.B.Sc. (Computer Science) - S	Sem – I
С	ourse Type: GE/OE Code : OE	C101CS
	<b>Course Title :Office Automat</b>	ion I
Teaching Scheme	No. of Credits	Examination Scheme
02 Hrs/ week	2	IE:15 marks
		UE: 35 marks
Prerequisites		
• Previous knowledge of	Computer concepts is assumed.	
• Knowledge of Compute	r as operational tool is required.	
Course Objectives		
• To introduce the foundation	tions of office automation espec	ially word processing.
• To develop the ability to	prepare the well formatted word	d documents.
• To prepare the documer	its using word processing tools s	uch as tables, figures, shapes etc.

• To pro	epare the word documents using advanced automated features.	
Course Outc		
	n of the course, student will be able to :	
-	re the professional word documents	
-	re various tools in the word processing software.	
-	op documents using word processing advanced tools.	
Course Cont		
Chapter 1	Working with Documents.	2 Hrs
-	ing & Saving files,	- 1115
1	ng text documents, Inserting, Deleting,	
	Copy, Paste, Undo, Redo,	
	Search, Replace,	
	atting page & setting Margins,	
	erting files to different formats,	
	rting & Exporting documents, Sending files to others,	
-	g Tool bars, Ruler, Using Icons, using help	
Chapter 2	Formatting Documents	2 Hrs
	g Font styles	
	election- style, size, colour, etc.	
	face - Bold, Italic, Underline,	
• •	settings, Highlighting, Special symbols.	
	g Paragraph style.	
	ments, Indents, Line Space, Margins,	
-	ets & Numbering	
Chapter 3	Setting Page Style	4 Hrs
	atting Page	
-	ab : Margins, Layout settings, Paper tray	
	r & Shading	
3.4 Colun		
	er & Footer	
	g Footnotes & End notes	
	cut Keys; Inserting manual page break, Column break and line break	
	ng sections & frames	
	oring & Wrapping	
	ing Documents	
Chapter 4	Setting Document Styles	2 Hrs
	of Contents	
4.2 Index		
4.3 Page 1	Numbering	

	& Time, Author, etc.	
	ting Master Documents	
4.6 Web		
Chapter 5	Creating Tables	7 Hrs
	e settings and Drawing - Inserting ClipArts, Pictures/Files et	tc.,
	ers, Alignments,	
	tion, deletion,	
	rging, Splitting,	
5.5 Sortir		
5.6 Form	ıula	
Chapter 6	Special Features	6 Hrs
	ting Formula, equation, symbols	
	ting Cliparts, pictures, objects, word art	
63 Draw	• 1 • • •

Savitribai Phule Pune University F.Y.B.Sc. (Computer Science) - Sem – I Course Type: GE/OE Code : OE102CS			
<b>Course Title : Introduction to Computers and Basics of Internet</b>			
Teaching Scheme	Teaching SchemeNo. of CreditsExamination Scheme		
02 Hrs/ week 2 IE : 15 marks			
UE: 35 marks			

Prerequisite	8	
-	knowledge of Computer concepts is assumed.	
	ledge of Computer as operational tool is required.	
Course Obj		
-	troduce the fundamental concepts of computers	
	troduce the basic concepts of Internet	
	evelop the ability to analyses and use the computer peripherals e	offectively
	velop the ability to analyses and use the internet effectively	
Course Out		
	on of the course, student will be able to :	
-		
	he computer peripherals effectively	
	he internet for the day to day life	
-	ore various applications available over the internet.	
Course Con		0.11
Chapter 1	Fundamentals of Computers	8 Hrs
	view of a Computer-Definition, functionalities of Computer	
	rations and Classification of Computers	
	ional Components of a Computer	
	cations Of Computers	
	vare and Hardware-Definition, types of software	
	luction to various Operating systems-Windows,Linux,Android,	
Chapter 2	Introduction to various Computer applications	6 Hrs
	us Explorers	
	rs such as Notepad, wordpad	
	llator, calendar, etc	
2.4 , Pain		
	us browsers	
2.6 Interr	net settings	
Chapter 3	Basics of Internet	6 Hrs
	finition and History of Internet	0 1115
	es and Applications of Internet	
	finition of Web	
	bsite Address and URL	
	ferent types of Internet Connections:	
	l up Connection	
	•	
	bad Band ( ISDN, DSL, Cable)	
	reless (Wi-Fi, WiMax, Satellite, Mobile) naming convention	
3.0 IVIC	des of Connecting Internet (Hotspot, Wi-Fi, USB Tethering)	

Chapter 3	Browsers and Email	10 Hrs
3.1 Sea	arch Engines	
3.2 We	eb Browsers	
• F	Popular Web Browsers (Microsoft Edge, Googl	le Chrome, Mozilla Firefox, Safari, etc.)
• F	Popular Search Engines.(Google, Bing, Startpag	ge ,DuckDuckGo etc )
3.3 H	Portals	
3.4 S	ocial Networking sites, blogs	
	sing Browsers :	
• \	/iewing webpage	
• I	Downloading and uploading the website	
3.6 E		
• (	Configuring an E-mail Account	
• (	Composing and Sending Mail	
• F	Receiving, Replying to and Forwarding Mail	
• A	Attachments to email

Savitribai Phule Pune University				
F.Y.B.Sc. (Computer Science) - Sem – I				
Course Type: GE/OE Code : OE103CS				
<b>Course Title : Introduction to Google Apps I</b>				
Teaching Scheme	Teaching SchemeNo. of CreditsExamination Scheme			
02 Hrs/ week	2	IE:15 marks		
		UE: 35 marks		
Prerequisites	· · · · · ·			
• Basic knowledge of Computer concepts is assumed.				
• Knowledge of Computer as operational tool is required.				
Knowledge of Internet is required				
Course Objectives				
• To introduce the foundations of various Google tools.				
• To develop the ability to analyses and use the tools effectively				
Course Outcomes				

On completion of the course, student will be able to :	
<ul> <li>Use the google tools for the day to day life</li> </ul>	
• Explore various applications available in the google tools.	- 1-
• Develop the skills to implement the skills available in the google to	DOIS.
Course Contents	
Chapter 1 Gmail	2 Hrs
1.1 Configuring an E-mail Account	
1.2 Composing and Sending Mail	
1.3Receiving, Replying to and Forwarding Mail	
1.4 Attachments to email	
Chapter 2 Google Drive	3 Hrs
2.1 Opening the Drive	
2.2 Creating folders, google docs, google sheets, google slides	
2.3 Managing Files and folders	
2.4 Sharing files and folders and managing permissions	
2.5 Downloading the files and folders	
2.6 Uploading files and folders	
2.7 Printing files	
Chapter 3 Google Docs, Sheets and Slides	8 Hrs
3.1 Creating Google docs, sheets and slides	
3.2 Formatting the documents	
3.3 Managing the document permissions	
3.4 Uploading/downloading the documents	
3.5 Special features in the docs, sheets and slides	
Chapter 4 Google Forms	7 Hrs
4.1 Creating a google form	
4.2 Adding various styles of the questions	
4.3 settings of the google form	
4.4 Creating the links of the google form and sharing the link	
4.5 Creating and managing the permissions	
4.6 Managing the data collected through google form	
Chapter 5 Other Google tools	10 Hrs
5.1 Google Calendar	·
5.2 Google Meet	
5.3 Google Chat	
5.4 Google Contacts	
5.5 Google Photos	
5.6 Google Maps	
Reference Books:	
1. Complete Beginners guide to Google Apps Script by Daniel Lawrie	

2.Google Apps made easy by James Bernstein
3. My Google Apps by Sherry Kinkoph Gunter

# Semester II

	SavitribaiPhule Pune Uni	versity
]	F.Y.B.Sc. (Computer Science)	- Sem – II
Co	ourse Type: MajorCourse Coc	de : CS-151-T
	Course Title :Advanced C Pro	ogramming
Teaching Scheme     No. of Credits     Examination Scheme		
02Hrs/ week	2	IE : 15 marks
021II3/ WOOK		UE: 35 marks
Prerequisites		
Problem Solving tools	like algorithms, flowcharts and	l pseudocodes.
• Basic knowledge of 'C	C' language.	
Course Objectives		
• To study advanced con	ncepts of programming using th	ne 'C' language.
• To understand code or	ganization with complex data t	ypes and structures.
• To work with files.		
Course Outcomes		
On completion of the course,	student will be able to :	
• Develop modular prog	grams using control structures, f	function ,pointers, arrays, strings and
structures		
• Design and develop so	olutions to real world problems	using C.
• Understand and repeat	t the sequence of instructions an	nd points for a memory location.
• Identification, analyza	tion, development, verify and d	locument the requirements for a
computing environment	nt.	
Course Contents		
Chapter 1 Pointers		8Hrs
1.1. Introduction to Point	ters.	
	on, initialization, dereferencing.	
1.3. Pointer arithmetic.		
-	n Arrays & Pointers- Pointer to	array, Array of pointers.
1.5. Multiple indirection	u i /	
_	ers- Passing pointer to function,	Returning pointer from function,
Function pointer.		
• •	anagement- Allocation(malloc(	),calloc()), Resizing(realloc()),
Releasing(free()).,		
1.8. Memory leak, dangli	ing pointers.	
1.9. Types of pointers.		
Chapter 2 Strings		6Hrs
	variables, declaration, definition	
2.1 String Literals, string 2.2 Syntax and use of prec		

2.4. Strings and Pointers         2.5. Command line arguments.         Structures And Unions         3.1. Concept of structure, definition and initialization, use of typedef.         3.2. Accessing structures         3.3. Nested Structures         3.4. Arrays of Structures         3.5. Structures and functions- Passing each member of structure as a separate argument, Passing structure by value / address.         3.6. Pointers and structures.         3.7. Concept of Union, declaration, definition, accessing union members.         3.8. Difference between structures and union.         Chapter 4 File Handling 6Hrs         4.1. Introduction to streams.         4.2. Types of files.         4.3. Operations on text files.         4.4. Standard library input/output functions.         4.5. Random access to files.         Chapter 5 Preprocessor         5.1. Role of Preprocessor         5.2. Format of preprocessor         5.3. File inclusion directives (#include)         5.4. Macro substitution directive, argumented and nested macro         5.5. Macros versus functions         Reference Books:         Reference Programming Approach Using C, Behrouz A. Forouzan, Richard F, Gilberg, Cengage Learning India         R3. The 'C' programming Approach Using C, Behrouz A. Forouzan, Richard F,	2.3 Array	of strings.			
2.5. Command line arguments.       8Hrs         Chapter 3       Structures And Unions       8Hrs         3.1. Concept of structure, definition and initialization, use of typedef.       3.2. Accessing structure members.       3.3. Nested Structures         3.4. Arrays of Structures       3.4. Arrays of Structures       3.5. Structures and functions- Passing each member of structure as a separate argument, Passing structure by value / address.       3.6. Pointers and structures.       3.6. Pointers and structures.         3.7. Concept of Union, declaration, definition, accessing union members.       3.8. Difference between structures and union.       6Hrs         Chapter 4       File Handling       6Hrs         4.1. Introduction to streams.       4.2. Types of files.       4.3. Operations on text files.         4.2. Types of files.       4.3. Operations on text files.       4.4. Standard library input/output functions.         4.5. Random access to files.       4.5. Random access to files.       2Hrs         5.1. Role of Preprocessor       2Lrs       5.1. Role of Preprocessor directive         5.2. Format of preprocessor directive       5.5. Macros versus functions       4.2. Structured Programming Approach Using C, Behrouz A. Forouzan, Richard F. Gilberg, Cengage Leaming India         R1. C: the Complete Reference, Schildt Herbert, 4th edition, McGraw Hill       R2. A Structured Programming Approach Using C, Behrouz A. Forouzan, Richard F. Gilberg, Cengage Leaming India					
Chapter 3       Structures And Unions       8Hrs         3.1. Concept of structure, definition and initialization, use of typedef.       3.2. Accessing structure members.         3.3. Nested Structures       3.4. Arrays of Structures         3.4. Arrays of Structures       3.5. Structures and functions- Passing each member of structure as a separate argument, Passing structure by value / address.         3.6. Pointers and structures.       3.7. Concept of Union, declaration, definition, accessing union members.         3.8. Difference between structures and union.       6Hrs         4.1. Introduction to streams.       4.2. Types of files.         4.3. Operations on text files.       4.3. Operations on text files.         4.4. Standard library input/output functions.       4.5. Random access to files.         Chapter 5       Preprocessor         5.1. Role of Preprocessor       2Hrs         5.2. Format of preprocessor directive       5.3. File inclusion directives (#include)         5.4. Macro substitution directive, argumented and nested macro       5.5. Macros versus functions         Reference Books:       R1. C: the Complete Reference, Schildt Herbert, 4th edition, McGraw Hill         R2. A Structured Programming Approach Using C, Behrouz A. Forouzan, Richard       F. Gilberg, Cengage Learning India         R3. The 'C' programming Approach Using C, Behrouz A. Forouzan, Richard       F. Gilberg, Cengage Learning India

SavitribaiPhule Pune University			
F.Y.B.Sc. (Computer Science) - Sem – II			
Course Type: MajorCourse Code : CS-151-P			
Course Title :Lab Course based on CS-151-P			
Teaching SchemeNo. of CreditsExamination Scheme			

04Hrs/ week	2	IE : 15 marks
		UE: 35 marks

#### Prerequisites

- Problem Solving of mathematical operator and function and array.
- Basic knowledge of 'C' language.

#### **Course Objectives**

- To study advanced concepts of programming using the 'C' language.
- To understand code organization with complex data types and programming structures.
- To work with files and its types.

#### **Course Outcomes**

On completion of the course, student will be able to :

- Develop modular programs using function, pointers, arrays, strings and structures
- Design and develop solutions to real world problems using Advanced C programming.

#### **Guidelines:**

LabBook: The lab book is to be used as a hands-on resource, reference and record of assignment submission and completion by the student. The lab book contains the set of assignments which the student must complete as a part of this course.

#### Submission:

Advanced 'C' Programming Assignments:

The problem solving assignments are to be submitted by the student in the form of a journal containing individual assignment sheets. Each assignment includes the Assignment Title, Problem statement, Date of submission, Assessment date, Assessment grade and instructors sign.

Programming Assignments:

Programs should be done individually by the student in the respective login. The codes should be uploaded on either the local server, Moodle, Github or any open source LMS. Print-outs of the programs and output may be taken but not mandatory for assessment.

#### Assessment:

Continuous assessment of laboratory work is to be done based on overall performance and lab assignments performance of student. Each lab assignment assessment will be assigned grade/marks based on parameters with appropriate weightage. Suggested parameters for overall assessment as well as each lab assignment assessment include- timely completion, performance, innovation, efficient codes and good programming practices.

#### **Operating Environment:**

For Advanced 'C' Programming:         Operating system: Linux         Editor: Any linux based editor like vi, gedit etc.         Compiler: cc or gcc         LAB Course Contents         Advance C Programming         Assignment 1       Pointers : Operations on pointers
Editor: Any linux based editor like vi, gedit etc. Compiler: cc or gcc LAB Course Contents Advance C Programming
Compiler: cc or gcc LAB Course Contents Advance C Programming
LAB Course Contents Advance C Programming
Advance C Programming
Assignment 1   Pointers : Operations on pointers
• Pointers - Declaration,
definition, initialization, d
• dereferencing
Pointer arithmetic.
Assignment 2 Pointers : Pointers and arrays
• Pointer to array,
• Array of pointers
• pointer to pointer
Assignment 3 Pointers :pointers and functions
Passing pointer to function,
Returning pointer from function,
Function pointer
Assignment 4 Pointers : Dynamic Memory allocation
Dynamic memory management (Allocation)
• malloc(),
• calloc(),
• Resizing(realloc()),
Assistant and 5 Delistant along line and for
Assignment 5 Pointers :dangling pointers and free
• Releasing (free ()).,
dangling pointers
Assignment 6 Strings : basic operations
• String Literals, string variables, declaration, definition, initialization and Syntax and use of predefined string functions
Assignment 7 Strings : array of strings & pointers
Array of strings and Pointers
• Array of strings and Pointers       Assignment 8     Structures : Basics
Structures . Dasks     Structure, definition and initialization, use of typedef.
Accessing structure members and Nested Structures     Assignment 9 Arrays of Structures and functions
Assignment 9 Arrays of Structures and functions
Arrays of Structures and functions- Passing each member of structure as a separate
argument,

Passing str	ructure by value / address.
Assignment 10	Pointers and Structures
Use of Pointer	rs and Structures
Assignment 11	Unions
Concept of Ur	nion, declaration, definition, accessing union members
Assignment 12	Command line arguments : basics
• To access	command-line arguments
• Functions	- atoi(), atol() and atof()
Assignment 13	Command line arguments : use of files
• Arithmeti	c operation on arguments
<ul> <li>Accessing</li> </ul>	string and file using command line arguments
Assignment 14	File Handling
• Streams an	nd Types of files.
• Operation	s on text files.
• Standard l	ibrary input/output functions and Random access to files.
Assignment 15	Preprocessor
• Preprocess	sor and Format of preprocessor directive
• File inclus	ion directives (#include)
<ul> <li>Macro sub</li> </ul>	stitution directive, argumented and nested macro and macros versus functions
<b>Reference Books</b>	
	mplete Reference, Schildt Herbert, 4th edition, McGraw Hill
	red Programming Approach Using C, Behrouz A. Forouzan, Richard
-	engage Learning India
	rogramming language, Brian Kernighan, Dennis Ritchie, PHI
-	ning in C, A Practical Approach, Ajay Mittal, Pearson
-	ning with C, B. Gottfried, 3rd edition, Schaum's outline Series, Tata McGraw
Hill.	
R6. Programm	ning in ANSIC, E. Balagurusamy, 7th Edition, McGraw Hill.

#### Note: Lab Book be prepared for this course by BOS.

Savitribai Phule Pune University F.Y.B.Sc. (Computer Science) - Sem – I Course Type: GE/OE Code : OE151CS Course Title :Office Automation II

Teaching Scheme	No. of Credits	Examination Scheme
02 Hrs/ week	2	IE:15 marks
		UE: 35 marks
Prerequisites		I
-	of Computer concepts is assumed.	
Knowledge of Comp	uter as operational tool is required	
Course Objectives		
• To introduce the four	ndations of office automation espe	cially Presentation Skills.
• To develop the abilit	y to prepare the well formatted pow	werpoint presentations.
• To prepare the present	ntations using powerpoint presenta	tion tools such as tables, figures,
shapes, images, audi	o, video etc.	
• To prepare the present	ntations using advanced automated	features such as animation, slide
shows, etc.		
Course Outcomes		
On completion of the course	, student will be able to :	
• Prepare the profession	nal presentations	
• Explore various tools	s in the powerpoint presentation so	ftware.
• Develop documents	using powerpoint advanced tools.	
Course Contents		
Chapter 1 Introduction	to Presentation.	5 Hrs
1.1. Opening new presen	tation,	l.
1.2. Different presentation	n templates,	
1.3. Setting backgrounds	,	
1.4. Selecting presentation	on layouts	
Chapter 2 Creating and	l Formatting Presentation	8 Hrs
2.1 Presentation style,		
2.2 Adding text to the Pr	esentation.	
2.3 Adding style		
2.4 Colour, gradient fills		
2.5 Arranging objects		
2.6 Adding Header & Fo	oter	
2.7 Slide Background, S	lide layout	
Chapter 3 Adding Gra	phics and effects to Presentation	12 Hrs
3.1 Inserting pictures, m	ovies, tables etc into presentation,	
3.2. Drawing Pictures us	ing Draw	
3.3. Setting Animation		
3.4 Transition Effect		
Chapter 4 Printing and	showing a presentation	5 Hrs
4.1 Printing Handouts		
4.2 Generating Standalor	ne Presentation viewer	

#### 4.3 Presenting the presentation using various styles

#### **Reference Books :**
